Week 11 Research

In JQuery, what does it mean to "traverse the DOM"?

Traversing the DOM refers to moving through an element tree based on their relationship with other elements. There are several methods made to help in traversing like first(), last(), eq(), and filter(). These methods, among others, help the programmer to find the information they looking for in the element tree by selecting specific groups of elements.

What is your favorite thing you learned this week?

My favorite thing I have learned this week is that great achievements were not meant to come easy. This is the first time I have studied a subject that I have truly struggled with. I have struggled so much in the past couple weeks that I have considered quietly quitting in my development journey. I'm blessed to have a great support system of friends, family, and other junior developers to keep me motivated and to remind me that I am not alone in the struggle. Although this has been the hardest week for me so far, I will keep on keeping on.
